Net Asset Value (NAV)	NAV Per Unit (NAVpu)	Par
Php 2.508 Billion	Php 246.516344	

Value: Php 100.00

Net Asset Value per Unit

Daily Percentage Change of NAVpu

Risk Characteristics:

One day VAR at 3σ:	0.90%
Volatility, Past 360 Days:	5.70%
Duration:	3.8696
Sharpe Ratio (Risk Free Rate = 1.5600%):	0.21
Information Ratio:	-0.08

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

After a steep rally in January, market yields corrected across liquid tenors mostly above the 10 year. Yields tracked US treasury movements as data coming out from the US strengthened the view of an earlier-than-expected rate hike. Meanwhile, Fuel and diesel price hikes sent jitters regarding inflation and further fueled a steep correction. With low liquidity ahead of the Chinese New year, market players remained defensive. Month-on-Month, yields were by around 50bps from the 10 year liquid bonds to the long end of the curve.

On the second meeting of the Monetary Board this year, the BSP kept rates unchanged with RRP still at 4%, Special Deposit Account at 2.5% and Reserve Requirement at 20% citing inflation expectations remain firmly anchored and robust domestic growth continue to be firm. Amidst, central banks in the region cutting key rates, BSP held rates steady and remained positive that the Philippines' growth dynamics are supported by buoyant private demand. BSP further cuts inflation forecast this year and the next to 2.3% and 2.5% respectively (from 3% and 2.6%) due to lower oil prices and stronger peso.
