INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Philippine Peso Fixed Income Portfolio is a peso-denominated bond fund designed to provide investors higher returns than traditional fixed-income savings products.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Philippine Peso Fixed Income Portfolio is suitable only for investors who:
 - Are individuals of legal age and corporations with a medium to long-term investment horizon
 - Have a moderately conservative risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Interest Rate Risk:** This is the possibility to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.
- **Credit/Default Risk:** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

OUTLOOK AND STRATEGY

The Philippines economy grew an annual 7.1 percent in the September quarter of 2016, following a 7.0 percent expansion in the second quarter and above market consensus of a 6.7 percent growth. This was the quickest pace since 2013. The expansion was mainly supported by strong private consumption despite weaker exports and less robust government spending.

The Bangko Sentral ng Pilipinas (BSP) kept its policy stance steady last Nov 10, 2016. The policy tools were left unchanged, with the overnight policy rate at 3.00%, overnight deposit rate at 2.50%, and reserve requirement ratio at 20%. The central bank believes that

inflation continues to be manageable though upside risks are rising. As a result, Bangko Sentral ng Pilipinas revised upwards its inflation forecasts to 1.8 % for 2016, 3.0% for 2017, and 2.9% for 2018 (from 1.7%, 2.9%, and 2.6% respectively.)

Emerging market in general sold off in reaction to the upset in the US elections. With Donald Trump's election rhetoric on pro-US growth and pro-fiscal stimulus economic policies, both nominal and real yields are at the upside risk. Yields on benchmark bonds rose 30 to 50bps across the curve as US treasuries rose to its fastest pace since the Taper Tantrum in 2013. Local bond yields rose on thin liquidity as players remained defensive to the sell-off.
