Risk Characteristics:

One day VAR at 3σ:	0.37%
Volatility, Past 360 Days:	2.31%
Duration:	2.95
Sharpe Ratio (Risk Free Rate = 3.68%):	1.87

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or loss. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

The BSP Monetary Board kept policy rates steady for the month of June after two successive rate hikes of 25bps each in the past two policy rate meetings. The more moderate than expected May inflation, although higher than the downwardly revised April numbers, indicated a slower path of inflation.

Despite the steady policy rate decision, market remains on the lookout for inflation breaching 5%. BSP reckons that inflation reaches a peak in October. Fiscal risk remains low. Moody's recent upgrade in sovereign ratings recognizes the improvement made in the fiscal consolidation program. Growth in tax revenues are likely to continue while prudent spending would keep the fiscal sector in line with the programmed deficit target of P300bn or 3.2% of GDP.

The government is planning to issue 10-and 20-year Treasury bonds in exchange for shorter-dated bonds. Development Bank of the Philippines and Land Bank of the Philippines will manage the debt swap. The issue size would likely be close to a similar P200bn offer last December 2010. The 10-year bond is said to be issued at 6.375% while the 20-year bond is to be issued at 8.0%.
