Risk Characteristics:

One day VAR at 3σ:	0.41%
Volatility, Past 360 Days:	2.5962%
Duration:	5.1729
Sharpe Ratio (Risk Free Rate = 12.054%):	2.49

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

The country's macroeconomic picture remained positive. Inflation in January came in at 3%, at the low end of the Bangko Sentral ng Pilipinas' (BSP's) target range and only slightly higher than the December inflation figure of 2.9%. The slight uptick was mainly due to the implementation of higher sin taxes, which led to alcohol and tobacco prices rising 17% YoY.

Remittances for 2012 amounted to US\$ 21.4Bn, higher by 6.3% YoY, despite the global economic uncertainty. Exports unexpectedly grew 16.5% in December 2012, driven by a resurgence in the manufacturing sector.

Local treasury notes echoed the positive macroeconomic fundamentals and rallied during February. Speculation on the closing of the BSP's Special Deposit Account (SDA) facility led to a bullish flattening of the yield curve, with yields falling by as much as 40bps for the 10-yr yields, and about 20 bps at the longer end of the yield

FOOTNOTES:

¹FUND VALUATION

The Dual Pricing Method shall be used in computing the Net Asset Value (NAV) of the fund. Under this method, the **Bid Net Asset Value per Unit (Bid NAVpu)** and the **Offer Net Asset Value per Unit (Offer NAVpu)** shall be calculated.

The **Bid NAVpu** is the redemption price. It is the price used when a client wishes to redeem units from the fund. The Bid NAVpu is calculated using the closing bid prices of the underlying assets of the fund for the day, net of fees and other allowable expenses.

The **Offer NAVpu** is the admission price. It is the price used when a client wishes to contribute to the fund. The Offer NAVpu is calculated using the closing offer prices of the fund's underlying assets for the day, net of fees and other allowable expenses.

The **Mid/Last Net Asset Value per Unit (Mid/Last NAVpu)** shall also be computed for information or reporting purposes only. For client reporting, the Bid/Offer values shall be provided in the financial statement footnotes.

i. The Mid NAVpu shall be computed for UITFs with fixed income assets. It shall be determined from the average of the bid-side and offer-side market yields-to-maturity or prices of the underlying assets of the fund for the day, net of fees and other allowable expenses.

ii. The Last NAVpu shall be computed for all UITFs with equity holdings. It shall be determined from the LAST closing prices of outstanding equity holdings for the day, net of fees and other allowable expenses.
