Volatility, Past 360 Days:	4.78%
Duration:	4.18
Sharpe Ratio (Risk Free Rate = 0.640%):	0.64

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

Philippine GDP grew 6.5% in Q4 2013 which was slower than revised 6.9% of its previous quarter. Annual GDP was at 7.2%.

In its scheduled Treasury Bills auction, BTR was able to issue 91-day bills at an average of 0.693% (fully subscribed) and 364-day bills at an average of 1.079% (undersubscribed). The 182-day bills auction was fully rejected. BTR also re-issued FXTN 3-20 at an average rate of 2.399%. Bids reached as high as 3.0% and the lowest was 2.125% with an average bid of 2.681%. The highest bid accepted was at 2.5% and the lowest was 2.125%.

The month of January began with a cautious sentiment as US tapering uncertainties and Philippine's inflation jitters once again plagued the market. This was reflected on the results of the unsuccessful re-issuance of the FXTN 3-20 with market demanding for higher yields. Demand for the 3 yr was 33.222B which was more than the offered 30B. Even the announcement of the Q4 GDP was a non-event as yields on 10 year bucket inched up on the average of 50bps on a month-on-month basis. Market will be waiting for the January inflation for guidance as BSP expects it to fall between 3.4%-4.3%.
