Sharpe Ratio (Risk Free Rate = 0.580%):	-0.67

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

February CPI grew at 4.1%, slowing down from 4.2% of January 2014. The Philippine Government incurred a budget deficit of P52.6B last December pushing its 2013 full year deficit to P164B. It surpassed its target by P75B. BSP kept its key policy rate steady at 3.5% but raised bank's reserve requirement by 1% from 18% to 19% effective on April 4, 2014 to curb excess liquidity. The central bank added that inflation in March will be likely 3.7% to 4.6% from the annual pace of 4.1% in February. Meanwhile, the Bureau of the Treasury had a successful issuance of its scheduled T-Bills and T-bonds. The T-Bill auction was well received with 91 day T-bills at 1%, 182 day at 1.4% and 364 day at 1.865%. The T-Bond auction was fully awarded with the new FXTN 7-57 at 3.5%. Investor demand for short term bonds and bills remained strong. Despite the uncertainty of the US tapering, the local market was able to resist the upward bias on rising interest rates. Strong liquidity and manageable inflation levels kept interest rate levels at bay.
