INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Dollar Bond Portfolio is a US Dollar-denominated bond fund designed to provide investors with higher returns than traditional fixed-income savings products. Earnings volatility is kept at moderate levels, through disciplined investment selection and tenor diversification.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Dollar Bond Portfolio is suitable only for investors who:
 - Are individuals of legal age and corporations with a medium to long-term investment horizon
 - Have a moderately conservative risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Interest Rate Risk:** This is the possibility to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.
- **Credit/Default Risk:** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

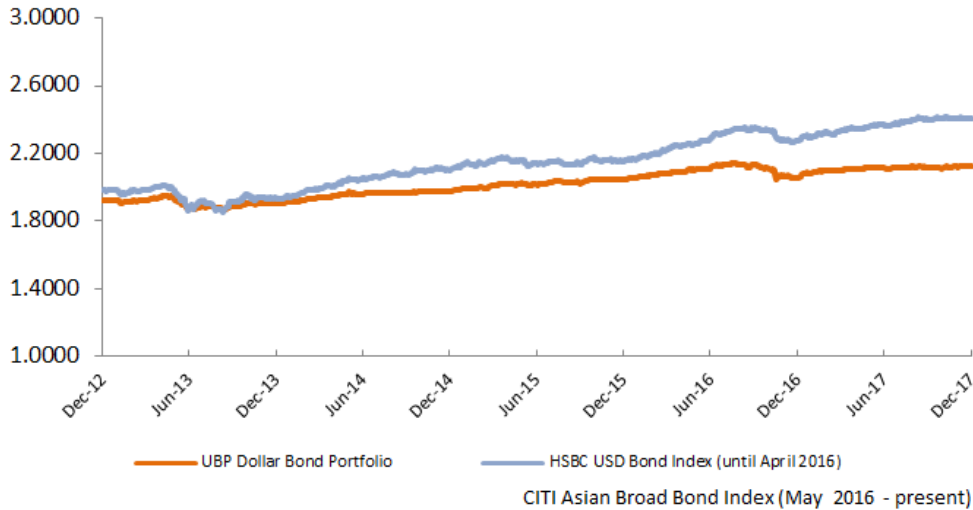

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

OUTLOOK AND STRATEGY

Market drivers for the last month of the year were mostly Taxes and Central banks. Both the Philippines and the US were able to pass their tax reforms just in time for the year end. Equity Markets in general perceived this as risk-on tone with MSCI world index finishing +21.57% for the year 2017. However, bond markets continue on their cautious tone ahead of the release of the FED minutes. Fed Minutes revealed diverging views on the path rate and raised their target range for the federal funds rate at 1.25-1.5%. Median federal funds rate projected at 2.1% in 2018 and 2.9% in 2019, up from 1.9% and 2.6% projections last September. Inflation projections remained unchanged at 2% for 2018 and 2019 and unemployment rate projections slightly down from 4.6% to 4.5% for 2017-2019. Meanwhile, the US yield curve continues to flatten as the short end creep up while the long ends move down at a slower pace. Emerging market bonds in general performed better as compared to high yields and investment grades. ROP's on the other hand moved in tandem with US treasuries. ROP 2042's was up +2.48% while ROP 2026 was up +0.44% for the year.
