## Fund Manager's Report

Shorter-tenor Philippine dollar bond prices fell this month as investors were spooked by potential oil shortages as a consequence of Iran's continued nuclear activities. Generally weaker US economic data coupled with rising oil prices combined to pressure investors' risk appetite. US Initial Jobless Claims increased to 359,000 from 351,000 in February. The US Consumer Price Index for February also increased to 0.4, from 0.2 a month earlier. ISM manufacturing and durable goods order improved slightly Month-on-Month, but were still below analysts' forecasts.

In the local setting, the Bangko Sentral ng Pilipinas (BSP) cut its key policy rates by another 25 basis points to counter potential ill-effects of lingering global economic problems on the Philippines. Key rates are now at 4 and 6 percent for overnight borrowing and lending, respectively. Despite the lower rates, inflation eased to its lowest level in more than two years.

The Philippines stands closer to a credit rating upgrade from Standard & Poor's (S&P) after having recorded a budget deficit of PHP 197.8 billion in 2011. This is narrower than the PHP 300 billion deficit targeted by the government earlier. S&P expects the country's debt profile to improve as the economy grows and revenue collection rises.
