Fund Manager's Report

Philippine US Dollar-denominated bonds (ROPs) initially traded lower as it tracked its fundamental risk-free rate, the U.S. Treasury bond yields. October saw a lot of positive data from the U.S. economy: with its 2 percent GDP growth, lower initial jobless claims, and higher payroll figures. These factors contributed to an amounting risk-taking appetite by market players and end clients just a month before the presidential elections.

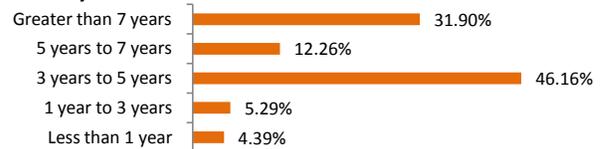

The market experienced a sell-off of U.S. Treasuries. The 30-year treasury yield was trying to break the 3 percent ceiling, while the 10-year U.S. Treasury Yield doing the same at the 1.85 percent level.

The ROP market ended on a high note due to the following factors: the Philippines received a catch-up credit ratings upgrade by Moody's, which makes the country just one notch below investment grade across all ratings agencies. Moreover, returning tensions from Greece's debt woes returned, which lured investors back to safe-haven securities. This pushed the US treasury yields down by 5-10 basis points.
