Fund Manager's Report

Philippine US Dollar-denominated bonds (ROPs) rallied on the back of several positive local market events. After the catch-up credit ratings upgrade by Moody's last October, the Philippine government initiated a buyback of its high coupon ROPs to manage its debt payments. Optimism over the country was further proven when third quarter Philippine gross domestic product (GDP) figures surpassed market expectations, as the country grew by 7.10% compared to the 5.50% consensus estimates. Overall, the ROP yield curve experienced a downward shift last November, as both liquid short-end and long-end bond yields traded down by 12 basis points.

Meanwhile, the spotlight is on the U.S. economy as speculation about the 'fiscal cliff' resumed. After getting elected for a second-term, President Barack Obama will now try to address the USD 16 trillion U.S. national debt. The U.S. government will now try to manage its debt obligations while providing enough room for fiscal spending and other growth measures to revive its economy. Taxation measures will be the key factor in this debate. The Federal Reserve (Fed) still remains dovish and supportive of growth, as policy rates for 2013 would remain low.
