#### Fund Manager's Report

The focus of the financial markets shifted its attention to the Bank of Japan and the Federal Reserve. The Bank of Japan unveiled an aggressive monetary stimulus plan to inject USD\$1.4Tn in less than two years aimed at purchasing long term government bonds and other risky assets to push interest rates lower.

Additionally, in the latest minutes released by the Federal Reserve showed mixed sentiments about the Fed's current USD\$85Mn per month bond buying program. Some Fed officials expressed concern that excessive purchases may eventually cause escalated inflation moving forward. Although there were no definite plans or indications on when the Fed will wind down its stimulus measures, the market is speculating that easing may be reduced or completely stop by the end of 2013.

In local news, the Philippines long term debt obligations were upgraded by Fitch to investment grade (BBB-) in March on the back of strong growth, stable inflation, healthy external finances and improved fiscal discipline.

Philippine dollar denominated sovereign debt (ROPs) yields fell by 20-30bps in the long end of the yield curve as it continue to track the decrease in US Treasuries yields. US Treasury yields fell compared to previous month due to global growth concerns.
