#### Risk Characteristics:

One day VAR at 3σ:	2.51%
Volatility, Past 360 days	15.84%
Duration:	1.9267
Sharpe Ratio (Risk-Free Rate = 1.831%):	0.78

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

#### Fund Manager's Report

The PSE saw another soft trading month for trading of stocks. The PSE index fell from 6,661 level to the 6,075 level due to emerging market outflows as the market takes into consideration growing FED tapering concerns, Syria matters and US dollar currency strength. Net foreign selling reached US\$506Million which is the largest selling outflow for the year in August 2013.

The month of August witnessed subdued bonds trading ahead of the FOMC decision in September. Yields were higher across the curve with liquid tenors on the 20 and 25 year bonds up 50 basis points from previous month's levels. The newly issued RTB 10-4 was seen trading at 3.36% before going back to par.

Even as July Inflation came out lower than expected at 2.5% and Philippine GDP growing at 7.5% pace in the 2<sup>nd</sup> quarter (vs. 7.7% previous quarter), the local market gauged movements in US treasuries and players stayed mostly defensive on the sidelines as thin liquidity was in play.
