Sharpe Ratio (Risk-Free Rate = 0.246%):	-0.15

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

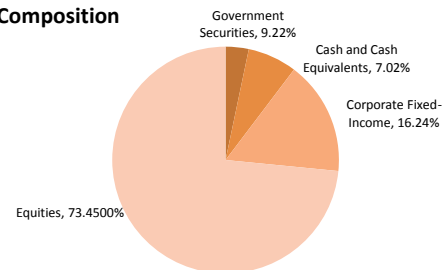

April marks the fourth straight month of the PSEi rising as it gained 4.16%. This comes off the back of strong foreign inflow which amounted to US \$363m. Contributing to the positive outlook on the market was infrastructure spending which is on budget to grow by 44% to PHP 430 bn. March's inflation eased to 3.9% from 4.1% as the deceleration from housing, utilities and fuel offset an acceleration from food inflation. The Philippines budget deficit narrowed in Feb as it came in at PHP 9.7bn.

All the sectors rallied this month with Mining and Oil (5.86%), Property (5.33%) and Financials (5.17%) rising by more than 5%. Closely following suit with 4%+ were Conglomerates (4.69%) and Services (4.63%). The Industrial sector lagged relative to the other sectors but still had a positive gain of 2.44%.

March CPI came out at 3.9% YoY against February's 4.1%. Inflation rate for the month was the slowest pace since November 2013. News came out that BSP sees April inflation at 3.6% to 4.5%.

BTR had a successful auction for the new Treasury bills and the reissuance of FXTN 03-20. BTR awarded 91 day at an average of 1.44%, 182 day at an average of 1.696% and 364 day
