INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Large Capitalization Philippine Equity Portfolio is a peso-denominated equity fund that uses a strategy that approximates the returns of the Philippine Stock Exchange Index (PSEi), while adding value through active stock selection. Its core investment components are large capitalization stocks listed in the PSE. Relative weights between PSEi stocks as well as opportunistic allocation into non-index issues (e.g. IPO's) may vary from time to time, depending on the investment manager's outlook on stock valuations. Research plays a central role in the development of stock valuation views of investment managers.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Large Capitalization Philippine Equity Portfolio is suitable only for investors who:
 - Are individuals of legal age and corporations with a long-term investment horizon
 - Have an aggressive risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

These investment outlets were approved by the Trust Committee. Likewise, all related parties transactions are conducted on an arm's length basis.

OUTLOOK AND STRATEGY

Christmas came early for the local market as the index rose 3.2% partially on the back of foreign inflow. Excluding large blocks related to FB, RRHI, and EDC, net foreign flows were still positive at + \$99 Mn. GDP for 3Q was at 6.1%, still strong in the region but grew at a slower rate versus previous levels. The 25 bp raise in policy rate this month, the latest in a cumulative 175bp over the past six months, may be a further cause for concern for growth. A likely upside risk that can help mitigate some macro concerns is the pending Rice Tariffication bill, which may help hinder inflation for 2019.

Earnings for the index grew 7% YoY for 9M18, largely driven by banks, property, and telco names. With names coming generally in line, we look to December as a gauge whether inflows will remain or if there's a reversal. Foreign players will watch macro data in turn and may ramp up flows if inflation and GDP figures improve.
