Sharpe Ratio (Risk Free Rate = 1.260%):	2.21

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

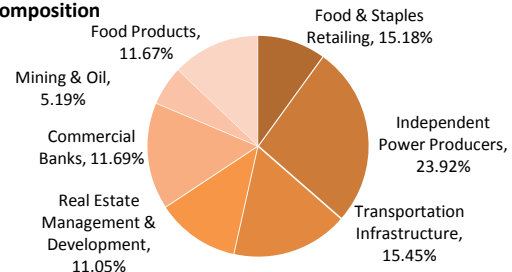

Fund Manager's Report

The Philippine Stock Exchange Index (PSEi) rose to new highs for the month of October. The PSEi closed higher at 5,424.51, up 1.47 percent from 5,346.10 last September. Foreign investors were net buyers for the month of October. The Philippine market is the top performer in the region as it soared 37.10 percent year to date and outperformed its regional peers.

The possibility of stricter foreign ownership rules on certain stocks continued to weigh on the market. The Securities and Exchange Commission (SEC) published draft rules on foreign ownership restrictions of select companies specifically those on the telecommunication, utilities, and property sectors.

Utilities were the best performing sector this month. Manila Electric Co. (PSE: MER) was the main contributor of the sector as it rose on the back of continued strong electricity demand. First Gen Corp. (PSE: FGEN) also rose as it announced the completion of the re-financing of its 500MW San Lorenzo power plant. The company signed a USD 420 million 10-year term loan facility. The proceeds will be used to repay the existing debt. Meanwhile, Energy Development Corp. (PSE: EDC) rose on expectations that the rehabilitation of its BacMan power plant would be completed soon. Manila Water Co. (PSE: MWC) also disclosed that it is acquiring a controlling interest in a firm that holds the water distribution and sewage service concession for Jakarta, Indonesia.

FOOTNOTES:**¹FUND VALUATION**

The Dual Pricing Method shall be used in computing the Net Asset Value (NAV) of the fund. Under this method, the **Bid Net Asset Value per Unit (Bid NAVpu)** and the **Offer Net Asset Value per Unit (Offer NAVpu)** shall be calculated.

The **Bid NAVpu** is the redemption price. It is the price used when a client wishes to redeem units from the fund. The Bid NAVpu is calculated using the closing bid prices of the underlying assets of the fund for the day, net of fees and other allowable expenses.

The **Offer NAVpu** is the admission price. It is the price used when a client wishes to contribute to the fund. The Offer NAVpu is calculated using the closing offer prices of the fund's underlying assets for the day, net of fees and other allowable expenses.

The **Mid/Last Net Asset Value per Unit (Mid/Last NAVpu)** shall also be computed for information or reporting purposes only. For client reporting, the Bid/Offer values shall be provided in the financial statement footnotes.

i. The Mid NAVpu shall be computed for UITFs with fixed income assets. It shall be determined from the average of the bid-side and offer-side market yields-to-maturity or prices of the underlying assets of the fund for the day, net of fees and other allowable expenses.

ii. The Last NAVpu shall be computed for all UITFs with equity holdings. It shall be determined from the LAST closing prices of outstanding equity holdings for the day, net of fees and other allowable expenses.

²PROSPECTIVE INVESTMENTS

The Fund may be invested and reinvested in:
