Risk Characteristics:

One day VAR at 3σ:	2.71%
Volatility, Past 360 Days:	17.04%
PSEi Index, Volatility Past 360 days:	19.806%
Sharpe Ratio (Risk Free Rate = 1.831%):	1.56

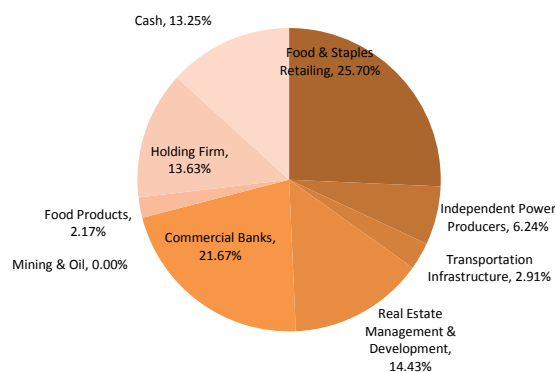

Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

The PSEi rose by 2.7% in July from a 7.9% decline the previous month. The locals lead much of the buying leading into a market rally on the back of Bernanke's statements that the US Fed will still maintain its accommodative monetary policy and the current pace of bond purchases until the US economy shows sign of persistent economic recovery. Average daily value turnover dropped to US\$ 171.5m from US\$265m in the previous month. Placements for the month came from Meralco. The PSEi outperformed its neighbors in July as well ahead of Indonesia, Thailand, and Malaysia.

The rise in PSEi was led mostly by mining, gaming and consumer sectors. Laggards mostly came from the banking sector as the market discounted a possible deceleration in earnings on the back of weak expectation of trading gains.

For the coming weeks, all eyes will be on FOMC and US monetary policy developments. We further expect markets to remain volatile with a downside bias.
