Volatility is a measure of fluctuation of the NAVpu. Higher volatility means higher potential for gains or losses. Duration measures the sensitivity of the portfolio to interest rate movements. The higher the duration, the more the NAVpu will change with interest rate fluctuation. The Sharpe Ratio is a measure of risk-adjusted return. The higher the Sharpe, the higher the return per unit of risk. Risk-free rate used to compute the Sharpe ratio is the 1yr TBill rate.

Fund Manager's Report

BTR issued new supply of Treasury Bills worth PHP 20B which fetched slightly lower than expected. Demand for the new bills was also thrice oversubscribed. Average rates for the 91 day, 182 day, and 364 day were at 1.44%, 1.676% and 1.87% respectively. BTR also had a successful re-issuance of FXTN 03-21 with an average rate of 2.51%. Auction was surprisingly more than two times oversubscribed filling the PHP 25B scheduled issuance.

Inflation eased in September to 4.4% from August's 4.9% and BSP holds the key policy rate at 4%. The Central bank also held SDA levels at 2.5% and held the reserve ratio at 20%.

The month of October witnessed a rally as the bulls prevailed the market scene. Positive sentiment flooded the market as easing inflation concerns spurred speculation that BSP will keep rates on hold until 2015 coupled with US federal Reserve hinting a prolonged stance for accommodative policy. In addition to the already strong urge to push yields lower, the Philippine government released its \$4QTR borrowing plan with minimal long dated securities. Month on Month, yields went down across the curve with the long end going down 30- 40 bps and the belly going down 50 bps mostly on the liquid securities.
