INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Peso Short Term Fixed Income Portfolio is a peso-denominated money market fund designed to provide investors a higher-yielding liquid outlet for their short-term transactional funds. It seeks capital preservation with enhanced yields.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Peso Short Term Fixed Income Portfolio is suitable only for investors who:
 - Are individuals of legal age and corporations with a medium to long-term investment horizon
 - Have a moderately conservative risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Interest Rate Risk:** This is the possibility to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.
- **Credit/Default Risk:** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

OUTLOOK AND STRATEGY

BSP's Felipe Medalla said: "The low inflation rate creates space for the BSP to reduce the reserve requirement" and "We have a very high reserve requirement, which should go down." Local bond yields tightened tracking UST movements and some players are already buying the front end in anticipation of a lower July CPI and the possible RRR cut from the BSP. Activity was relatively muted and generally focused on the 20-17(16yr) and 10-59 (9yr). The longer bonds traded at the range of 4.10%-4.15% while the latter closed at 3.55%- 3.59% pct. Move downwards was gradual as players took advantage of lower yields to take profit.

Meanwhile, the BTR successfully issued Php25.0B of the 5-72 at 3.089%, within market range of 3.050% to 3.100%. BTR also stated that they are looking to do a PHP bond swap in September before the Fed lift off.

The Fund's prospective investments include (a) Securities issued or guaranteed by the Philippines government, or the Bangko Sentral ng Pilipinas; (b) Exchange-listed securities and funds; (c) Marketable instruments that are traded in an organized exchange; (d) Loans traded in an organized market; (e) Savings/Checking accounts and/or time deposits in any bank of financial institution, including UnionBank of the Philippines; and, (f) Such other tradable investment outlets/categories as the BSP may allow.
