INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Peso Short Term Fixed Income Portfolio is a peso-denominated money market fund designed to provide investors a higher-yielding liquid outlet for their short-term transactional funds. It seeks capital preservation with enhanced yields.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Peso Short Term Fixed Income Portfolio is suitable only for investors who:
 - Are individuals of legal age and corporations with a medium to long-term investment horizon
 - Have a moderately conservative risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Interest Rate Risk:** This is the possibility to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.
- **Credit/Default Risk:** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

OUTLOOK AND STRATEGY

BTR successfully re issued FXTN 05-73 for P25B which was 2 times oversubscribed. Market tender was P56.002B that reached a high of 3.725% and a low of 3.5%. The auction averaged 3.647%. The Central bank kept its policy rate unchanged as widely expected citing manageable inflation and robust growth conditions continue to support monetary policy settings. With Inflation declining to 1.3% YoY in January from 1.5% in December, inflation expectations remain within BSP's target range.

After an unexpected dovish tone from the Fed and a manageable local inflationary environment, PhP-denominated bond yields held a rally in February as the market sought after yield. The yield curve initially bull steepened as short-dated tenors pushed yields downwards especially after the unexpected BOJ's adoption of negative discount rate. Long ends followed after minutes of the meeting from the FED hinted a delay in the much anticipated hike in policy rates. Five years reached 3.5% while the 10 year and the 15 year reached lows of 3.7% and 4.08% respectively.
