### INVESTMENT OBJECTIVE AND STRATEGY

The UnionBank Peso Short Term Fixed Income Portfolio is a peso-denominated money market fund designed to provide investors a higher-yielding liquid outlet for their short-term transactional funds. It seeks capital preservation with enhanced yields.

### CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

- The UnionBank Peso Short Term Fixed Income Portfolio is suitable only for investors who:
  - Are individuals of legal age and corporations with a short-term investment horizon
  - Have a moderately conservative risk profile
- The principal is at risk. Loss in the original investment may arise due to market fluctuations and price volatility of the securities held by the fund.

### KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are comfortable with the accompanying risks.

Some of the key risks associated with this Fund are listed below:

- **Interest Rate Risk:** This is the possibility to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
- **Market/Price Risk:** This is the possibility to experience losses due to adverse changes in market prices of securities. It is the exposure to the uncertain market value of a portfolio due to price fluctuations.
- **Liquidity Risk:** This is the possibility to experience losses due to the fund's inability to sell and convert assets into cash immediately or in instances where conversion to cash is possible but at a highly disadvantageous price.
- **Credit/Default Risk:** This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.

The Fund invests in quality assets which are evaluated under the Trust Department's accreditation process and BSP regulations. Internal risk limits, together with regulatory exposure limits, are monitored, reviewed and strictly adhered to on a daily basis.

**OUTLOOK AND STRATEGY**

Consumer Prices in the Philippines rose 1.1% YoY in April which was slightly below market consensus of 1.2%. Inflation continues to remain below Bangko Sentral ng Pilipinas' target of 2-4% which may give room for BSP to keep rates on hold in the coming Monetary Board meeting. BTR had weak demand for April's Treasury Bill auction as market players bid for higher yields. The 91 days fetched an average of 1.55% and 364 days fetched 1.779%. The 182 day Tbill was partially awarded and fetched an average rate of 1.758%. BTR also issued FXTn 07-58 (7yr) in the month of April. This auction however managed to be successful as demand grew to almost 2x the planned auction size. FXTN 07-58 fetched an average of 3.461%.

Local bond yields generally tracked US treasury yield movements as market players continue to take their cue from the FED, ECB and BOJ. GS market yields saw the yield curve steepen as big players increased appetite for the short dated securities and others taking profit from the long end of the curve.
